EmotionShift: hand-in standards

EE6405 Group Project, Table 4 · for the final video, slides, code and demo · integration: Lixian · full version in the repo: docs/TEAM_GUIDE.md

Please hand in your part **in these formats**, so everything can be merged into one video in the last week. The rule behind all of it: **send source files** (text, data, separate images, separate audio), not screenshots of tables or view-only links.

Course requirement (EE6405 brief)	
Video	**10 minutes max**; must show **Python code**, **slides for theory** and **references**
Voice	**No AI-generated voice**: everyone records in their own voice
Code	**.py** or **.ipynb**
Also	Signed group reflection with each member's contribution; AI declaration form; peer evaluation on NTULearn (mandatory, otherwise 5% deduction)

1. Slides (2–3 per person, about 1 min 30 s)

Item	**Format**
Your slides	The shared team template, 16:9
Script	In each slide's **speaker notes** (or a script.md, one section per slide)
Figures	Each figure as its own **PNG, at least 1600 px wide**, plus the **CSV** of its numbers
Result numbers	A **summary.json or CSV** with the shared metrics (below)
References	Plain-text list in **APA style**

Shared metrics: MELD weighted-F1; DailyDialog micro-F1 excluding neutral on *test_dedup*; macro-F1 for both; scores per stratum (first / stable / shift); 95% bootstrap CI. `emotionshift/eval/metrics.py` computes all of them.

2. Code (in the GitHub repo)

- Your **own folder or module**, using the **shared data loader** so we all have the same splits, labels and shift definition. Run `bash scripts/fetch_data.sh` once after cloning.
- **One executed notebook with outputs** (used to show code in the video); see `notebooks/b1_tfidf_svm.ipynb`.
- **Prediction CSVs**, one per test split and seed, in the shared format below.
- The **code to show in the video**: notebook cell(s) or file + line range, max 15 lines each.
- **How to run it**: command, rough run time, GPU or not, extra packages.
- **For the demo (#3–#6)**: the saved model and `predict(list_of_utterances) -> list_of_emotions`, labels in the order neutral, joy, surprise, anger, sadness, disgust, fear.

```
from emotionshift.data.loaders import load
df = load("meld") # or "dailydialog"

# prediction CSV columns:
dataset, split, dialogue_id, turn, speaker, text, emotion, pred,
stratum, shift_type, model, seed
```

How to add your work (no invite needed): Fork the repo → add your files in your fork (git push, or Add file › Upload files) → Contribute › Open pull request. Lixian reviews and merges.

3. Narration (no AI voice)

- Record in **your own voice**, **one audio file per slide**, named like `03_name_slide2.m4a`.
- **M4A or WAV** (a phone voice memo is fine); quiet room, no background music.
- Want to show code running live? A **1080p MP4 screen recording**, also in your own voice.
- Read what is in your script and check each clip's length.

4. Admin items

- **Contribution note**: 3–5 lines on exactly what you did (for the group reflection).
- **AI declaration form: one per person.** It has one name, one matriculation number and one signature, so each member fills in and signs their own; all forms go in our single team submission. Tick the phases where you used AI and add a shareable link to your **complete, unedited** AI chat.
- Note: the form allows the **NTU AI Enterprise Suite** (Option A) or a third-party tool **explicitly approved by the instructor** (Option B). We are confirming with the instructor which tools are allowed.
- **Signature** on the group reflection, once it is final.

Where to put it

One folder per person, in the repo's `deliverables/` folder (or the shared drive if files are too large for Git):

```
deliverables/02_lixian/
  slides.pptx    script.md    refs.txt    contribution.txt
  figures/  (PNG + matching CSV)
  audio/    (01.m4a, 02.m4a, ...)
```

Deadlines

When	What
End of Week 12 (Sun 8 Nov)	Code, prediction CSVs, result numbers (pull request merged)
Tue 10 Nov	Slides, script, figures
Wed 11 Nov	Narration audio
12–14 Nov	Integration and editing
Sun 15 Nov, 11:59 pm	**Submission**
